

# Exercise: Homepage Creation

**Grade:** *100 points*

## Objective:

Markup text content into appropriate HTML syntax.

## Overview:

Using the provided template.html file, begin adding introductory information about yourself such as a brief bio, your hometown, your major, hobbies or interests, classes you are enrolled in, and contact info or links. Organize it, by marking it up with different HTML elements such as headers, paragraphs and lists; whatever you need to start creating a home page about yourself.

This page will serve as a basis that you'll continue to develop on, and eventually provide links to the other exercises and project that you will complete for this course.

## Process:

- Download the template.zip file and extract its contents
- Duplicate the template.html file, and change its name to index.html
- Add your text content and mark it up with HTML text elements
- Open your file in a browser to view and test it
- Once completed, submit this file into the assignment dropbox

## Rubric:

Demonstrate a variety of appropriate HTML elements	40 points
Use correct opening and closing tag structure	20 points
Create an HTML file that renders in the browser without errors.	20 points
Use correct file naming	20 points
